

MACHINE SHIELD™ GUARDING SYSTEMS

*Shield Employees from Dangerous Work Areas
and Guard Valuable Machinery against
Unauthorized Use with Steel Guard's
Machine Shield™ Guarding Systems*

A SAFER WORKPLACE

TOP 10 OSHA CITATION

Machine Shield™ Guarding Systems keep unauthorized personnel out of hazardous machinery areas, and protect your valuable equipment and storage areas against damage and theft.

- Prevents access to dangerous equipment
- Unique "interlock" system prohibits machine usage when fence is open
- Protects employees from welding flash and other hazards
- Optional gate design allows authorized staff to pass through. You set the level of security you need.

A MORE FLEXIBLE MACHINE GUARDING SOLUTION

- "Hinged Frame" design lets you secure even odd-shaped areas like hexagons or octagons.
- Easily Relocatable: Unlike chain link fences, if you need to move the system to another part of the plant, it's a snap. All 4 x 8 panels can be trimmed on site allowing for cutouts and adjustments.
- Create separate work cells with our flexible configuration options. Protect from lathes, grinders, robotic welding. (certified by OSHA, ANSI, NAAMS, EN953, and Canadian CSA)
- Modular design allows gates to be expanded to fit your requirements. Heights up to 20' can accommodate any security applications.
- Panels can be stacked to heights & widths that fit your application, or expanded later to accommodate changing conditions
- Hinged Gates come with your choice of Thumb Turn, Door Knob, Key Locks, or Lever Handle entrances.
- Weld-View Fabric comes in transparent yellow, green, blue, or red and can be added to protect outside workers from harmful welding arc and flash.

HEAVY-DUTY CONSTRUCTION TO WITHSTAND YOUR HARSHTEST CONDITIONS

- Strong, 14 gage steel L-2" x W-2" frame, powder-coated in yellow, gray, or black
- Sturdy 8 gage wire mesh panels woven into 1½" x 3" or 1½" x 1½" rectangular openings provide a clear view of work area. (Custom sized woven wire mesh panels also available.)
- Base Plates have a sturdy bolt-through system to adhere the industrial safety guards.

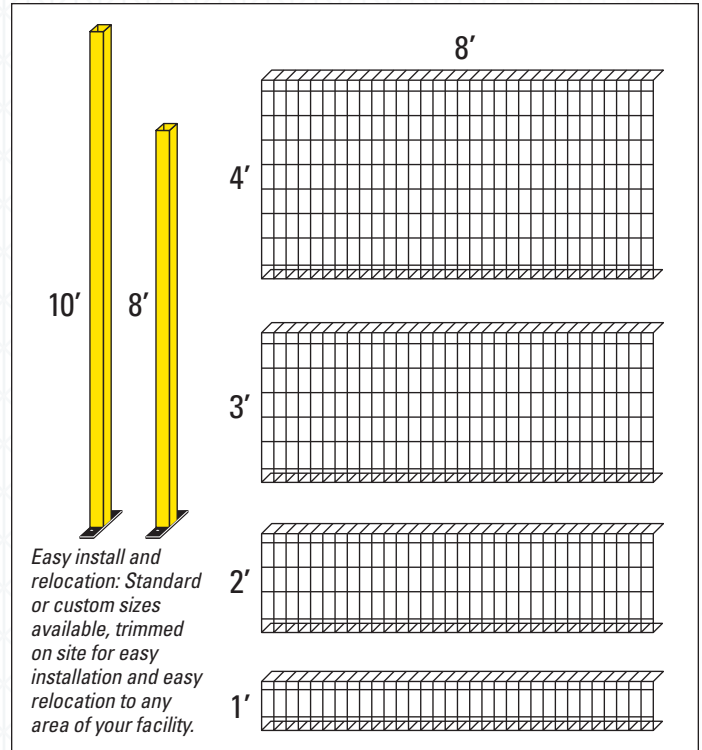

PRODUCT OPTIONS AND SPECIFICATIONS

MACHINE SHIELD™ ECONO-QWIK SERIES

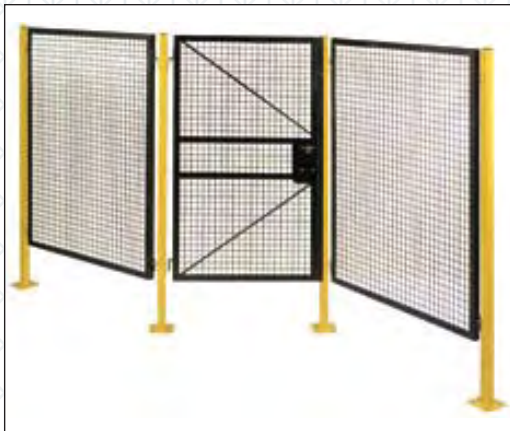

- Most economical system for protecting your machinery, robotic cells, and dangerous equipment.
- Unique Qwik Fence welded wire panels create a strong bond with over 500 welds in a 4' x 8' panel

- Wire mesh panels can be cut in the field to accommodate special changes in dimensions.
- Compliant with OSHA, ANSI, NAAMS, EN953, and Canadian CSA,
- 5-year Warranty.

MACHINE SHIELD™ HD SERIES

- Appropriate for heavy duty jobs with woven wire gages with extra side braces and a tighter welded wire weave of 1½" x 1½" spacing.
- HD Series flexible design allows you to freely

position fence panels from 0-180 degrees, allowing for unique design parameters. (Such as circle, oblong, octagonal, and straight run)

- 7 different hinged-gate options to address your security needs.
- Design is modular and stackable for easy expansion. Custom sizes available.
- Compliant with OSHA, ANSI, NAAMS, EN953, and Canadian CSA
- 5-year Warranty.

Safety interlock switch allows machine operation when lock is engaged, and when switch is unlocked machine operation stops.
