Steel Guard Safety Products

At Steel Guard Safety we take pride in our heritage of Industrial Fabrics Manufacturing which dates back to 1913. Our focus is...and always has been...to provide you with durable industrial safety products and services.

But, we've added something to that long, strong foundation: a focus on innovation. We're always looking for new better, forward-thinking ways to keep you safe, productive, and organized.

On top of that we now offer the most bold, secure warranty in the industry, The Iron Clad Warranty. Warranting not just the materials and construction, but if you are fined by OSHA for improper flame resistance protection, we are so confident we will pay your fine (contact your Steel Guard Rep for more details).

And because we offer a full line of safety products, we are your single source for protection no matter what your industrial environment.

Our knowledgeable Sales and Customer Service Staff is committed to your needs. Not just at the time of sale...but for as long as you use your Steel Guard solutions.

Our production facility is ready to meet your needs. Many products are stocked and available for quick 24-hour delivery right to your door. Need custom-manufactured products to fit your application? We'll design them to your precise specifications.

So, give us a call today.

Steel Guard: We're here to help you keep your employees safe and your plant running smoothly.

Machine Shield Econo-Qwik Series

- Most economical system for protecting your machinery, robotic cells, and dangerous equipment.
- Unique Qwik Fence welded wire panels create a strong bond with over 500 welds in a 4' x 8' panel. Panels contain a 1½" x 3" spacing.
- With the flexible Qwik fence design you can create cells at various angles, not just 90 degrees.
- Wire mesh panels can be cut in the field to accommodate special changes in dimensions.
- Compliant with OSHA, ANSI, NAAMS, EN953, and Canadian CSA.
- 5-year Warranty.

Interlock Switch	MGHDf A 150

*Enter desired listed measurement in place of the generic (H) or (W)

Machine Shield HD Series

- Appropriate for heavy duty jobs with woven wire gages with extra side braces and a tighter welded wire weave of 1¼" x 2½" spacing.
- HD Series flexible design allows you to freely position fence panels from 0-180 degrees, allowing for unique design parameters. (Such as circle, oblong, octagonal, and straight run)
- 7 different hinged-gate options to address your security needs.
- Design is modular and stackable for easy expansion. Custom sizes available.
- Compliant with OSHA, ANSI, NAAMS, EN953, and Canadian CSA
- 5-year Warranty.

***We set ourselves a daunting task:
To create a vinyl that...***

- ***boasts an R-value of 1.14 or higher, high enough to guarantee you energy savings***
- ***meet the strictest of codes for flame resistance including CFM, NFPA-701 and ASTM E-84 class 1 protecting you from fines***
- ***protect against mildew, harmful chemicals and UV rays***
- ***protect against heat up to 180 degrees***
- ***provide cold crack resistance down to -20 degrees***
- ***provide the highest tensile and tear strength on the market***
- ***and, of course, be affordable enough to give you an attractive ROI***

Not an easy task. And all the ultra-strong vinyls we could find were prohibitively expensive...so we had to create...

Something Completely Unique.

Our engineers developed a tri-lateral (three-directional) polyester scrim design. It may look odd compared to traditional vinyl patterns, but it was cost-effective and, most importantly, boosted the tensile strength of the vinyl to over 406 pounds per square inch!

That's more than EIGHTY-FOUR PERCENT stronger than a standard 9x9 denier x 1000 row scrim!

Not only did we surpass all the requirements we set for your vinyl, we are so confident in our construction methods that we offer a 5-year warranty on the construction of all premium welding curtains, industrial curtains, and custom covers.

The bottom line is you get the toughest, most durable safety products, avoid costly fines, save energy, and give you an attractive ROI.

STEEL-SCRIM™ VINYL

Weight: 16oz. sq.yd.

Polyvinyl Chloride (PVC)

Scrim

Proprietary
Tri-Lateral
Scrim Design
Tensile
Strength:
406 lbs./sq.in.

Polyvinyl Chloride (PVC)

Standard Two-Way Scrim
Tensile Strength: 220 lbs./sq.in.

Opaque Materials

16 oz Steel-Scrim™ Vinyl - Our proprietary Tri-Axial Scrim Design with 406 lbs of tensile strength gives Steel-Scrim™ Vinyl over 84% more tensile and tear strength over a standard 9 x 9 denier x 1000 row scrim. Meets strict flame resistance tests – CFM, NFPA-701, and ASTM E-84 Class I.

Transparent Materials

20 Mil Clear Vinyl - Double-polished clear vinyl allows for a view of work areas. An optional feature on industrial curtains. Meets flame resistance tests for CFM, NFPA-701.

Features

- Exterior seams use a rot-resistant nylon thread sewn with a double-lock stitch. Heavy-duty polyester webbing is inserted in the top hem for extra strength. Not available in common industrial curtains.
- Interior seams are heat welded at +1000°F for an air & liquid tight seal.
- Velcro hook and loop attachments are sewn on the sides of the curtains to attach uniformly in any configuration.
- 3/8" galvanized steel chain is inserted into the bottom pocket for stability against drafts.

Galvanized Steel Track with Nylon Roller Hooks

#2 Toothed Grommets

Hook and loop Velcro attachments

3/8" Electronically Galvanized Steel Chain is inserted into the bottom pocket for stability against drafts

Steel Guard's Steel-Scrim™ Industrial Curtains give you the industry's toughest protection against grinding, painting, harmful chemicals, and a rock solid barrier between dangerous industrial processes.

Design Your Industrial Curtains with our Roller Track System to create almost any configuration. Have the flexibility to divide work space in an instant or open up your Industrial Curtains for a clear, open floor space.

SPECIALTY SAFETY CURTAINS

Electro-Shield Anti-Static Curtains

A superior anti-static, transparent vinyl curtain. A carbon scrim grounds out electrical charges, bringing the curtain down to zero voltage. Static free, ideal anywhere a dust-free environment is vital. Grounding Wire with clips allows complete security for stopping dangerous static charges. Velcro hook and loop allows panels to connect modularly. Use them these applications:

- Dangerous Electrical Machinery
- Dust Free Environments
- Clean Rooms

Blackout Curtains

Blackout Curtains provide an environment completely void of light. Steel Guard's blackout curtains are made of 100% blackout fabric that is NFPA-701 approved for flame resistance. Blackout curtains can be designed in almost any configuration with our roller track system, which allows them to move in and out of use with ease. Wherever bright light is a major problem, blackout curtains block it in:

- **Industrial Plants**
- **Laser labs**
- **School & university labs**
- **Prisons**
- **Medical clinics**
- **Photography**
- **Sleep study labs**
- **Airport security**

chain is hemmed. Available with Sew-on or Velcro attachments.

Curtain Floor Sweep

Ideal when an additional seal is needed to keep your work area tightly sealed from dust, spray, and elements. Our curtains are designed to sit just under an inch off the floor. The curtain floor sweep is effective in keeping the abrasion and wear down on the vinyl pocket where the

Floor Mount Tie-Downs

Tightly secure your industrial curtain to the floor when updraft, and wind affect your work area. The tie downs include a floor mount D-ring which the curtain attaches to via a 1" Velcro hook and loop fastener. This option is ideal for paint booths, prep stations, or for high levels of wind or draft.

Adhesive Velcro Strips

Create an air tight seal with your curtain and any interior or exterior wall. The 2" Velcro hook and loop adhesive strip can stick to any surface including brick, metal, or dry wall and creates a seal between walls and your curtain. Available by the foot.

Weld-View Tinted Windows

Provide any curtain with the protection from harmful welding flash. The tinted transparent window comes in different colors for varying degrees of light protection. The weld-view window is available in tinted see-thru yellow, aztec orange, blue, or shade 8.

The Durable, Low-Cost Alternative to Expensive Automatic Door System

Steel Guard's Hi-Grade Polished Strip Curtain design allows less contact between the strips and passing machinery prolonging the strips life and saving you money. Steel Guard's strip curtains are excellent for

- Temperature/Energy Control
- Grinding & Welding Protection
- Barrier between Light & Dust
- Containment of Hazardous Materials

Allow People - But Not Cold Air - To Pass to Quickly to Adjoining Rooms

Industrial PVC strip curtains are an economical solution to stop up to 30% energy loss resulting from a lack of heating or cooling containment. They are quick to install and ship out in 1-2 days. Our PVC Strip Curtains are manufactured from the highest-grade PVC that is smooth, highly flexible and transparent. The high-grade PVC material also prevents the problems of "curling" over time for a longer life.

Use them in almost any entry area:

- forklift entries
- crane ways
- dock doors
- large equipment traffic areas
- freezer doors
- welding applications
- storage areas

Our transparent PVC materials come with these optional features:

- Ribbed design
- Anti-Static Material
- Locking strip design
- Weld-View Tinted Colors
- Scratch-Guard to protect and prolong the transparency
- USDA Food Grade - All Standard

Strip Curtains Sound Transmission Loss

Food Processing Curtains help keep the wash down cycle time to a minimum while keeping your production lines isolated from contaminants. Manufactured specifically for the food production industry and ideal for wash down areas, food production, clean room environments or other work stations. Steel Guard's food processing curtain wall systems are available with the following features:

- Curtains are manufactured with a 40 mil USDA clear flame resistant PVC is a non-porous material for specific food grade applications to eliminate bacteria from forming and cross contamination build-up
- Opaque material may be used in certain applications requiring light blocking
- A 304 stainless steel track system as well as stainless steel grommets are used to comply with industry standards, eliminating rust as well as potential bacteria

Manufactured using all heat welded seams (no sewn hems) to create a "seamless" curtain that prevents bacterial growth

40 Mil Food-Grade USDA PVC

40 Mil Certified USDA for Food Grade Applications as well as CFIA for Canadian Food Inspection Agency. Meets NFPA-701 & CFM for flame resistance.

Custom Covers

Stop harmful damage to your equipment and save money at the same time.

Dust, dirt, and oil causing production problems and even accidents in your plant? Not to mention costly repairs on malfunctioning machinery?

Here's your simple, cost-effective solution: Tough-as-nails vinyl covers protect machines & equipment, protect employees, and prevent productivity loss. For extreme heat applications use one of our high-heat materials (pg 8 and 9) for a machine cover.

Custom Clear Partition Systems and Soft Wall Curtains

The Economical Way to VISIBLY Partition Light, Heat, Workers, and Equipment.

See-through soft wall curtains can help you...

- protect valuable machinery
- speed traffic flow
- reduce traffic "accidents"
- control temperature
- reduce noise
- shield workers against light, flash, even static

Unique Application? Special Fabrics Required? Just Ask!

- manufactured to virtually any size.
- stationary track or standard roller track available
- mesh panels in stock
- custom floor attachments
- push-button buckles
- high heat application fabrics
- laser light environment materials
- anti-static area fabrics
- add snaps, grommets, chain weighted hems, buckles, or Velcro

Custom Fabrication

Steel Guard makes custom curtain, covers, shrouds, and tarps to virtually any size from our wide variety of fire resistant fabrics. We electronically weld and sew all products with the highest quality materials and craftsmanship for superior quality, and lasting protection. You design it and we will make it, or our Customer Service and Design Team can assist you with completing your project. Cutouts, wind ties, straps, turn buckles, strip door walk-throughs are some of the many custom features offered. When designing a custom curtain please contact our Customer Service for assistance with special design features. Have a specialty material not listed? Chances are we can source it, and design a solution for you.

SOUND SHIELD™

NOISE CONTROL CURTAINS

High noise levels in the workplace lead to...

- Loss of concentration
- Accidents and injuries
- Reduced productivity
- Long-term hearing loss
- OSHA fines and costly employee testing and training

Effective, Flexible Configuration

- ½ PSF (pounds per square foot) to 2 ½ PSF surface protection,
- reduces sound transmission levels by up to 61 decibels (call for details)
- 54-inch wide panels can be manufactured up to a height of 25 feet.
- Track mounted systems slide in and out of use in minutes
- fitted with our optional durable .160 gage work-view PVC window for greater visibility
- 5-layer construction (2 layers of fiberglass and 3 of vinyl) means incomparable durability and noise reduction.

Custom Designed for Your Application: Most any configuration can be custom manufactured to your specifications.

Sound Shield™ Effectiveness

Energy Shield insulated pallet covers and cold storage blankets provide extreme protection against chill or heat damage. These Thermal Pallet covers provide excellent insulation of solids and liquids including medical fluids, pharmaceutical components, water based paints, industrial chemicals, frozen foods, or any type of sensitive industrial materials. If you need this kind of protection, Steel Guard Safety will customize your pallet covers to any size or specification

There are many industrial applications for insulated covers and high-quality Energy Shield pallet covers provide added value:

Features & Benefits:

- Made of 18 oz. coated flame resistant vinyl for a tear proof, puncture resistant cover. NFPA-701 certified.
- Insulated with 2-sided aluminum faced bubble wrap for extreme heat & cold protection.
- Velcro attachments on four sides provide easy attachment & re-attachment.
- 4-sided seams make it easy to collapse.
- Re-useable with some applications.
- Provides high level of light and UV protection.

Customizable to any size.

Insulated Covers use Energy Shield S-Type I Material.

- ENERGY SHIELD MATERIAL S-TYPE I
- Energy Shield Type I Stationary – 2 layers of 18 oz coated vinyl sandwiched around 2 layers of Bubble Foil Insulation. R Value = 3.0 and a temperature separation of 17 degrees F (9 degrees C).

Covers fold flat

Energy-Shield insulated curtain walls with new 3M Thinsulate Fold-A-Way thermal technology are the cost-effective way to divide temperature zones for many applications. Use them in freezer-to-freezer, cooler-to-cooler, freezer-to-ambient storage, food storage, and other work areas. They are easy to move and modify, and are able to open up and close to 1/3 the original size to allow large machinery or equipment to access your temperature controlled areas. For applications where permanent stationary walls are desired Steel Guards Energy Shield Stationary Insulated Curtains are your best solution.

- **The Fold-A-Way System can “Slide” and “Collapse Out-of-the-Way” with our track and roller system for periods when curtains are not in use**
- **Division of plant space for temperature zoned areas at 1/3 to 1/5 the cost of permanent wall construction**
- **Creation of moveable, flexible walls to allow varying access restriction for conditioned environments, seasonal needs, or plant layout changes**
- **Easy and quick installation, eliminating the need for building permits, contractors, or costly plant shutdowns**
- **Modular design that allows for the addition of more panels and easy attachment with Velcro**
- **Variable track options, including a universal mount that allows for easy installation at door fronts and eaves**

Velcro closure

Energy Shield Fold-A-Way Material

ENERGY SHIELD MATERIAL F-TYPE I

Energy Shield Type I Fold-A-Way – 2 layers of 18 oz coated vinyl sandwiched around 1 layer of 3M Thinsulate Ultra Insulation. R Value = 3.0 and a temperature separation of 17 degrees F (8 degrees C) – Folds away on our Roller Track System.

ENERGY SHIELD MATERIAL F-TYPE II

Energy Shield Type II Fold-A-Way – 2 layers of 18 oz coated vinyl sandwiched around 2 layers of 3M Thinsulate Ultra Insulation. R Value = 6.0 and a temperature separation of 24 degrees F (13 degrees C) – Folds away on our Roller Track System.

Are Skyrocketing Energy Costs Eroding Your Warehouse's Bottom Line? Recapture the 1,000's of dollars leaving your warehouse facility every month in the form of massive utility bills.

Partition off unused areas with Steel Guard's Warehouse Curtain Dividers

One solution is to partition off those unused areas. You've thought of this and you know this would save you money. But, if you're like most, you've investigated permanent wall construction... and you're still reeling from the sticker shock. The ROI numbers just don't work.

But, what if you could divide those room areas for one-tenth the cost of permanent walls?

Vinyl warehouse divider curtains are a great energy saving device that cost one-tenth as much as permanent walls or barriers and are effective at cutting energy bills by partitioning off unused warehouse space. (see our energy savings calculator to determine how much you could save).

Wasting Thousands of Dollars on Increasing Exorbitant Energy Costs. Want to Cut Your Costs by 50%? Log On To Get Your Free Guide - www.SteelGuardSafety.com/industrial-curtains-page2.htm

Our research and development team has come up with a free guide on how you can save up to 50% on your exorbitant rising energy costs. The guide consists of a step by step layout that may save you thousands on your energy costs. Also take a peek at our energy cost calculator. If you think you can't afford our vinyl curtain products you may be wasting more money by not putting them to use.

Outdoor curtains keep wind, rain and snow out, maintaining environment and temperature consistency in nearly any type of facility.

Outdoor curtains are the perfect solution for sealing up your exterior building to block out temperature, and inclement weather in your work environment. Whether it's wind, rain, or snow, Steel Guard Safety's industrial outdoor curtains will protect your facility for years against harsh weather and other elements, plus they are extremely cost effective. Next to permanent concrete, or brick wall construction, they are up to 5 times as lower priced, while offering the same level of protection.

The difference in Steel Guard's exterior curtains is our thorough manufacturing process. Steel Guard uses the same heavy-duty industrial strength manufacturing process that is in our welding and industrial products, taken to the next level. Our process ensures that all outdoor curtains are constructed to resist wear and tear through years of use.

Heavy-Duty Industrial Exterior Curtain Features

- 18 oz. coated reinforced vinyl and optional 40 mil PVC window panel, both NFPA-701 and CFM Certified for flame resistance
- Reinforced electronically welded webbing on interior panels spaced every 4' vertically and 5' horizontally for extra toughness
- Electronically welded interior seams on vinyl fabric for superior strength.
- #2 brass grommets set every 1' that will not rust over time
- Wind ties set every 4' for stabilization
- Velcro attachments and available turnbuckles for securing curtains
- Curtains that are "customizable" to your exact size, color and project specifications

Keep Pests Out and Fresh Air In

Keep birds and insects out while keeping your employees cool, comfortable and productive.

Open warehouse doors are a safety and security nightmare... mice, rats, birds, insects and even human intruders can wander into your work place, destroy equipment, steal property...even spread disease.

Flow-Tex Mesh Curtains let in fresh, cool air but keep out bugs, flying insects, and birds.

Solid Mesh Curtain Design keeps air flow through out your plant

- high quality coated vinyl mesh, allows air flow through interior of buildings
- protects against pests, mildew, ultra violet rays, rot, water, and most chemicals.
- 16 gage galvanized steel roller track allows large vehicles and machinery to move in or out
- high shade factor keeps energy costs low
- 3-year warranty on Flow-Tex Mesh Curtains and a Lifetime Warranty on track hardware.
- Adhesive hook and loop Velcro attachments allow for a quick, tight seal

Allow People and Equipment to Pass....Keep Cold Air Out.

High traffic areas are notorious energy drains. Every time the doors swing open to allow equipment or employees to pass, heat goes with them...and your energy bill shoots through the roof.

Steel Guard Safety's Impact Doors give you an R-value of up to 13, keeping energy loss, and energy bills low. The unique V-Cam hinge is durable enough that we can offer a Limited Life-Time Warranty on all RD, FD, and HD series impact doors.

The secret to the V-cam hinge is an easy opening and positive closing without the need for mechanical actuating devices. When the door is bumped the V-cam automatically returns the door to the closed position.

Use them in any application

- Heavy and Light Industry
- Food Processing Plants
- Retail Stores
- Poultry Industry
- Restaurants
- Pharmaceutical & Medical Facilities

Steel Scrim™ Welding Curtains – the most durable protection available on the market from:

- Weld Flash
- UV Light
- Welding Arc
- Cutting & Grinding

Features

- Exterior seams use a rot-resistant nylon thread sewn with a double-lock stitch. Heavy-duty polyester webbing is inserted in the top hem for extra strength. Not available in common welding curtains.
- Interior seams are heat welded at +1000°F for an air, and liquid tight seal.
- Velcro hook and loop attachments are sewn on the sides of the curtains to attach uniformly in any configuration.
- 3/8" galvanized steel chain is inserted into the bottom pocket for stability against drafts.

Design Your Welding Curtains with our Roller Track System to create almost any configuration. Have the flexibility to divide work space in an instant or open up your Welding Curtains for a clear, open floor space.

Opaque Materials

16 oz Steel-Scrim™ Vinyl - Our proprietary Tri-Axial Scrim Design with 406 lbs of tensile strength gives Steel-Scrim™ Vinyl over 84% more tensile and tear strength over a standard 9 x 9 denier x 1000 row scrim. Meets strict flame resistance tests – CFM, NFPA-701, and ASTM E-84 Class I. See page 4 for details.

Transparent Materials

14 Mil Weld View Vinyl - Weld-view window is optional on premium Steel-Scrim™ Welding Curtains

Weld-View Transparent Materials

Yellow Weld-View - (Lightest Protection)

Recommended for low to medium amperage welding applications. Creates a bright work environment.

Aztec Orange Weld-View – (Medium Protection)

Recommended for medium amperage welding applications reflects more light in and out than other colors. Creates a fairly bright work environment.

Blue Weld-View – (Medium-High Protection)

Recommended for medium-high amperage welding applications, blocks most UV light. Provides a darker work environment.

Shade 8 Weld-View – (High Protection)

Recommended for Plasma Cutting, Laser Welding (Shade 8 protection) and high amperage welding applications to block most all UV light. There is little to no visibility. Provides a very dark work environment.

Welding Curtain Rolls

- 14 mil double polished polyvinyl chloride (PVC) material - CFM approved.
- Available in 3 different protective semi transparent colors - yellow, orange and shade 8.
- #2 grommets set on 1' centers along one side of the roll.
- Roll Size: Width - 74" x Length - 75'.

Color	Part Number

WELD-SHIELD

WELDING SCREENS

- **Keep your plant OSHA certified for welding protection**
- **Protect your workers from costly injuries like optical flash burn.**
- **Stop replacing cheap frames. Use Weld-Shield the strongest, thickest gage frame on the market.**

Portable, economical, and easy to adjust, STEEL GUARD™ Welding Screens are flexible and built to last

- Made from 16 Gage electronically galvanized U. S. Steel.
- Square Tube design keeps frame from buckling and twisting for a longer life.
- Grommets set on 12" centers on all four sides.
- Screens easily attach to the frame via zip ties.
- Available in 5 vinyl colors so you can choose the level of protection that is right for your application.
- Weld-Shield Screens are stocked and ship within 24 hours.

WELDING BLANKETS

AND HIGH HEAT CURTAINS

- **Protect yourself & your equipment from dangerous welding, high-heat, & cutting applications.**
- **Provide protection from extreme heat up to 2000 Degrees.**

Steel Guard Safety's welding blankets made from fiberglass, and silica yarn materials provide ideal protection in a variety of high temperature industrial applications:

- Welding Slag
- Heat Treating
- Stress Relief
- Molten Splash
- Grinding
- Machine Covers
- Personal Weld Pads

Quality Construction

All high temperature fabrics meet a minimum spec for flame resistance of CFM and NFPA-701. Welding blankets are hemmed on all four sides using a strong, heat resistant fiberglass thread. All sides have stamped #2 grommets at 24" on center.

Stock Welding Blankets

All stock sized welding blankets are available for delivery within 24 hours. Custom sizes can be manufactured to your exact specifications. Grommets are only set on White Spark™ Silica Cloth unless requested

How To Choose The Right High Heat Material

		MATERIALS						
		WELD ARMOR™	ARC-TEX™	NEO-PRENE	SLAG-SHIELD™	RED SPARK™	WHITE SPARK™	KNIGHT ARMOR
USES	Welding Vertical - General Purpose Welding with Light Sparks & Spatter	●	●	●	●	●	●	●
	Welding Horizontal - General Purpose Welding - Medium Sparks & Spatter			●	●	●		●
	Grinding & Arc Gouging					●		
	Furnace Blanket						●	●
	Slag Protection				●		●	●
	Heat Treating						●	
	Stress Relief - Up to 800 Degrees		●					
	Stress Relief - Up to 1800 Degrees						●	

* For High Abrasion applications use COATED MATERIALS

** For Stress Relief use ONLY UNCOATED MATERIALS

*** For Horizontal Applications - USE HEAVIER MATERIALS or multiple layers

**** COATED Material has better abrasion and burn through resistance

***** UNCOATED Material has more pliability and is easier to drape around objects

WELDING BLANKETS

AND HIGH HEAT CURTAINS

				72" Roll x 50 yd	FAi Knight Armor 16-72

Protect workers from harmful welding flash and grinding sparks.

Width, Gage & Overlap Percentage	Part Number (sq. ft.)
BRONZE/AMBER WELD-VIEW	
8" - .080 Gage - 50% Overlap	Scw.08.08.50
8" - .080 Gage - 100% Overlap	Scw.08.08.100
12" - .120 Gage - 100% Overlap	Scw.12.12.100
12" - .120 Gage - 66% Overlap	Scw.12.12.66
AZTEC ORANGE WELD-VIEW	
8" - .080 Gage - 50% Overlap	Scw.AO.08.08.50
8" - .080 Gage - 100% Overlap	Scw. AO. 08.08.100
12" - .120 Gage - 100% Overlap	Scw. AO. 12.12.100
12" - .120 Gage - 66% Overlap	Scw. AO. 12.12.66

*All Scw Parts Include: Cut & Punched Strips, and Universal Galvanized Mounting Hardware.

Easily have Welders pass into and out of welding, grinding, and energy-wasting work areas. No struggling with heavy, awkward doors. Pass through without the dangers of sparks and flash burn from passer by's.

Excellent for:

- Safe View of Welding & Grinding
- Quick Access to Hazardous Areas
- Maintaining Temperature
- Resisting Debris Impact

Use With:

- Universal Mount System
- Roller Track & Trolley System

How to Order Industrial Curtains

1. Select the "Base" Material for your Industrial Curtains (16 oz Steel-Scrim™) and then select the desired color.
2. Decide if you would like an optional Work-View Clear Vinyl window in the curtain(s)
3. Measure the height of the curtain – by measuring from the bottom of the floor (at its highest point of the floor – accounting for uneven floors) to the top of where you will mount the track (or top of curtain for systems without track)
 - Curtains are manufactured from the factory 3" shorter than measurement to account for the track and roller system and a 1" gap from the floor.
4. Decide the Design Configuration for your Industrial Curtains. Straight Run, L-shape (2-sided), U-shape (3-sided) or O-shape (4-sided). With custom or odd shapes a sketch is helpful.
 - If you decide to use 90 degree track sections around curves each curve is accounted for 2' in each direction of the curve. (actual distance around the curve is slightly less.)
5. Decide the width of each of your curtains within your desired systems.
 - Curtains are manufactured from the factory adding 3% to the order width for proper drapage, plus 2" for the Velcro "tail" on curtain(s).
6. Decide the type of mounting system for your Industrial Curtains: Beam to Chain (suspended mount), Threaded Rod (suspended mount), Wall Mount (up or down) or Floor Mount System. Suspended mounts are most common. Threaded rod, chain, or aircraft cable are not supplied by the factory.

How to Order Welding Curtains

1. Select the "Base" Material for your Welding Curtains (16 oz Steel-Scrim™) and the desired color. (Econo Welding Curtains come only in .014 mil vinyl)
2. Decide if you would like a .014 mil Weld-View Vinyl Window (Options: Yellow Transparent, Aztec Orange Transparent, Blue Transparent or Shade 8 Transparent) or no window.
3. Measure the height of the curtain – by measuring from the bottom of the floor (at its highest point of the floor – because of uneven floors) to the top of where you will mount the track (or top of curtain for systems without track)
 - Curtains are manufactured from the factory 3" shorter than measurement to account for the track and roller system and a 1" gap from the floor.
 - For Welding Cells with little ventilation be sure to account for at least 3" of space on the bottom of the curtains. (Standard is 1").
 - Econo-Welding Curtains are Manufactured to CUT SIZE, making them 3" shorter in height and width.
4. Decide the Design Configuration for your Welding Curtain System. Straight Run, L-shape (2-sided), U-shape (3-sided) or O-shape (4-sided). With custom or odd shapes a sketch is helpful.
 - If you decide to use 90 degree track sections around curves each curve is accounted for 2' in each direction of the curve. (actual distance around the curve is slightly less.)
5. Decide the width of each of your curtains within your desired systems.
 - Curtains are manufactured from the factory adding 3% to the order width for proper drapage, plus 2" for the Velcro "tail" on curtain(s).
6. Decide the type of mounting system for your Warehouse Dividers – Beam to Chain (suspended mount), Threaded Rod(suspended mount), Wall Mount (up or down) or Floor Mount System. Suspended mounts are most common. Threaded rod, chain, or aircraft cable are not supplied by the factory.

How to Order Welding Blankets & High-Heat Curtains

1. Account for Stock Size Welding Blankets (& High-Heat Curtains) to be 3" to 4" shorter in height and width due to sewn hems and interior seams. Size=Cut Size.
2. When being used as a High-Heat Curtain (in the vertical direction) the item should have at least 3" ventilation from the floor in welding applications.
3. When being used as a High-Heat Curtain account for at least 3% extra in width for drapage. Example: 10' track run, order one 5' wide curtain and one 6' wide curtain (accounts for over 3% drapage)
4. When being used as a Welding Blanket (in the horizontal direction) for best protection use multiple layers of blankets.
5. For Custom Sizes specify if size is to be finished size (where end product is to exact measurements).
6. (OPTIONAL – IF USING WITH A ROLLER TRACK SYSTEM) Decide the Design Configuration for your curtain system. Straight Run, L-shape (2-sided), U-shape (3-sided) or O-shape (4-sided). With custom or odd shapes a sketch is helpful.
 - If you decide to use 90 degree track sections around curves each curve is accounted for 2' in each direction of the curve. (actual distance around the curve is slightly less.)
7. (OPTIONAL – IF USING WITH A ROLLER TRACK SYSTEM) Decide the type of mounting system for your High Heat Curtains – Beam to Chain (suspended mount), Threaded Rod (suspended mount), Wall Mount (up or down) or Floor Mount System. Suspended mounts are most common. Threaded rod, chain, or aircraft cable are not supplied by the factory.

How to Order Warehouse Dividers

1. Select the "Base" Material for your Warehouse Divider (16 oz Steel-Scrim™ or 18 oz Coated) and the desired color.
2. Decide if you would like a Work-View Clear Vinyl Window or not.
3. Measure the height of the curtain – by measuring from the bottom of the floor (at its highest point of the floor – because of uneven floors) to the top of where you will mount the track (or top of curtain for systems without track)
 - Curtains are manufactured from the factory 3" shorter than measurement to account for the track and roller system and a 1" gap from the floor.

- Curtains with no Roller Track Systems are manufactured to exact height.
4. Decide whether you want Vinyl Floor Sweep or not.
 - Vinyl Floor Sweeps effectively seal off dust or control temperature more effectively with your Warehouse Divider.
 5. Decide the Design Configuration for your Warehouse Divider. Straight Run, L-shape (2-sided), U-shape (3-sided) or O-shape (4-sided). With custom or odd shapes a sketch is helpful.
 - If you decide to use 90 degree track sections around curves each curve is accounted for 2' in each direction of the curve. (actual distance around the curve is slightly less.)
 6. Decide the width of each of your curtains within your desired systems.
 - Curtains are manufactured from the factory adding 3% to the width of the order width for proper drapage, plus 2" for the Velcro "tail" on curtain(s).
 7. Decide the type of mounting system for your Warehouse Dividers – Beam to Chain (suspended mount), Threaded Rod (suspended mount), Wall Mount (up or down) or Floor Mount System. Suspended mounts are most common. Threaded rod, chain, or aircraft cable are not supplied by the factory.

How to Order Strip Curtains

1. Measure the height and width of your door opening.
 - If your door HEIGHT does not measure to an even foot, you will need to order the next size up in height. On site adjustments of "cutting to fit" using a carpenter's knife to cut the PVC strips to make the proper height.
 - If your door WIDTH does not measure to an even foot, you will need to order the next size up in width. On site adjustments are to either mount the universal hardware on the face of the door (in front of the opening) allowing for the extra width, or cut the hardware down to fit inside the door opening.
2. Decide the width of strips and the overlap of strips for your system.
 - Use the chart to decide the proper strip size for your entry way.
 - Larger overlaps are for a tighter seal and better temperature control through entry ways.
3. Decide the color of strips for your system (Use Bronze for welding applications, heavy traffic with large machinery Ribbed or Scratch Guard is recommended)
4. Decide the type of Universal Mount Systems you would like: Universal Galvanized Mount, or the Universal Aluminum Bullet Mount.

How to Order Custom Covers (5 - Sided)

1. Decide the base material for your cover along with the desired color.
2. Measure in order the Length x Width x Height of around the object being covered.
 - Be sure to allow for at least 1" extra (Length, width, and height) in dimension in all measurements.
3. Decide if you need any openings with Velcro, or "slits" hemmed in any of the sides of the cover to allow for access.

How to Order Flo-Tex™ Mesh Curtains

1. Select the color for your Flo-Tex Mesh Curtains.
2. Decide the type of mounting system for your Flo-Tex Mesh Curtains selecting either a Wall Mount (Opposing - Down) or a Ceiling Mount (Mounting underneath the Bay Door.)
3. Measure the height of the curtain – by measuring from the bottom of the floor to the top of where you will mount the track.
 - Curtains contain a "Floor Sweep" to seal the bottom of the curtain.
4. Decide the width of each of your curtains within your Bay Door.
 - Curtains are manufactured from the factory adding 3% to the width of the order width for proper drapage, plus 4" for the Velcro "tails" on both sides curtain(s).

How to Order Sound Shield™ Noise Control Curtains

1. Select the overhead shape of the containment – 1-Sided, 2-Sided (L-Shape if you are in a corner), 3-Sided (U-Shape if you are back against a wall), or 4-sided.
2. Be sure to measure the height of the curtains from the floor to the top of the track where you are mounting them. Be sure to keep a height of at least twice the height of the object emitting noise.
3. Measure the number of 4'-6" wide panels including the last one as a smaller "half panel" (to your size) if needed. Be sure to deduct 2" on total width for every panel you need to account for the Velcro attachments. Generally a distance of the objects width and length surrounding the curtain will be efficient to absorb the noise.

4. Decide if you would like an optional .160 mil Work-View window or not.
5. Decide on portable panels or the track mounted system for your Sound Shield™ Curtains – Beam to Chain (suspended mount), Threaded Rod (suspended mount), Wall Mount (up or down) or Floor Mount System. Suspended mounts are most common. Threaded rod, chain, or aircraft cable are not supplied by the factory.
6. *Many sound applications require the help of an Applications Specialist from Steel Guard Safety, so we always recommend you consult one of our staff to make sure you are designing a system that will work in your environment.*

How to Order Machine Shield™ Perimeter Guarding

1. Select the overhead Shape of the containment – 1-Sided, 2-Sided (L-Shape if you are in a corner), 3-Sided (U-Shape if you are back against a wall), or 4-sided.
2. Measure the height of the system. Most National (U.S. – OSHA) and international requirements require at least a height of 6' for your perimeter fencing system. The gap for the fencing on the bottom must be no higher than 12". We recommend a gap of 6".
3. Measure the Width of the System on each side. Use Fencing Panels plus 2" posts to add up the total number of posts and panels in the system. For Example: One 2" Post, One W-5' x H-8' panel, and another 2" post would = a 5'-4" wide system.
4. Add Gates in place of panels where entry is required and choose from the five styles of locking mechanisms.
5. *Many machine guarding areas require the help of an Applications Specialist from Steel Guard Safety, so we always recommend you consult one of our staff to make sure you are designing a system that will work in your environment.*
